Providing gas-related technologies to the American Gas Industry

➤ Application

This tool is used to secure the tapping tee to the service pipe during electrofusion. It maintains the assembly in position during the melting and cooling cycles.

It is very quick to install. As it is very inexpensive, it can be supplied with each tapping tee and left in place after use.

➤ Characteristics

- ✓ Currently designed for use with INNOGAZ tapping tees
- ✓ Save time
- ✓ Simple to use
- ✓ Provide long-term protection of the service pipe connection
- ✓ Optimizes the sleeve fusion process
